

pHix[®] Compact

New pH / Redox (ORP) / Temperature transmitter designed for easy installation and high performance.

MJK introduces the *pHix[®] Compact* with its innovative and very handy design. *pHix[®] Compact* measures pH more easily and more accurately than before. With this new technology and advanced design, MJK virtually eliminates all known faults and error sources.

pHix[®] compact

pHix[®] Compact has a new double junction electrode with lower impedance, larger electrolyte volume, and a larger reference junction, resulting in longer lifetimes than traditional pH electrodes.

pHix[®] Compact has electrode, fittings, cables and transmitter built together in a single housing, eliminating bad cable connections and leaky fittings. This integrated design uses a union nut at one end or an external thread at the other for easy installation in pipes and open tanks, without complicated fittings.
